

Unstarted Data

Case

$$P_0(R^i = r \mid M(V) = \omega, R_{1 \dots s}^i = e) = \sum_D$$

~~then~~

- Table II Why no targeting / wanting
- Pl on "related" from slide
- Pls on "quality"; "good/bad" management
- Conceptual framework to anticipate operations vs people management & managers vs prod workers
- ~~fixing~~ Prep. version of firing / extension figure looks like "firing"
- Need to make labels match text
- ~~Some argument about flattening~~
Need Pl to explain "flattening" out in firing [Questioning hockey-stick]
